## **Targeted Auditing Clinical Tool**

### Clinical Services T.A.C.T

Our experienced team of Clinical Advisors work closely with customers to develop an excellent added value service that can range from delivery of bespoke educational events, assistance to develop equipment selection guidance and protocols and to educate staff teams on the correct and appropriate use of pressure redistributing devices and profiling beds.

Our extensive knowledge of equipment selection has allowed us to develop a specialist clinical audit process T.A.C.T. This ward level clinical tool is utilised by our clinical advisor team. We aim to improve patient care and appropriate equipment selection through ward level review of actual support surface selection against explicit customer selection criteria. Agreed criteria contained in this audit are reported on and where indicated, changes are implemented at an individual, team or service level and further monitoring is used to confirm improvement in support surface management and usage.
